Manifolds, Cabinets & Mixing Groups

Cabinet on wall

Romania - Purmo

- Heavy-duty construction
- Flexible installation
- Security features
- Easy access
- Adjustable mounting options

Description

The Cabinet On Wall, with its fixed height and depth, is the optimal choice for retrofitting manifold systems. Constructed from durable galvanised and powder-coated sheet steel, it is designed to meet the toughest requirements. The unit offers adjustable mounting, ensuring compatibility with various manifold heights (690–800 mm). Removing the back panel facilitates ease of access and installation. A removable pipe guide and key lock provide added security and ease of operation, making it a preferred choice for numerous applications.

Area of Application

Cabinet On Wall is primarily designed for the retrofitting installation in residential, dressing rooms, or boiler rooms. It is rated for wall-mounted applications with a fixed height of 700 mm and depth of 150 mm. It offers centrally-located heating solutions for manifold systems.

Selection Criteria

Use our design service for a tailored selection. For a quick guide, refer to our brochure to choose the cabinet that fits your manifold size and wall conditions.

Basic User Instructions

Ensure to unpack the unit and check all components. Use a level to align the cabinet. Attach it to the wall using appropriate fixings considering the wall type and condition. Make certain the mounting rails and pipe guides are adjusted for manifolds of height 690–800 mm. Always leave the instruction manual with the end user.

Prescription text specifiers

The Cabinet On Wall for manifold systems features a fixed height of 700 mm and depth of 150 mm, with no back panel. It's constructed from galvanised and white powder-coated sheet steel. The cabinet includes a removable pipe guide and adjustable mounting rails for manifold heights between 690-800 mm. It provides robust protection and easy access, secured with a lockable door mechanism. Ideal for retrofitting, it combines durability and functionality for various installation environments. Suitable for boiler rooms, dressing rooms, or centrally located heating solutions in residential settings. Includes components for a seamless installation.
